

STRATEGIC PARTNERSHIP

The First Truly Managed Open-Source Platform

STACKTIC & SUSE Rancher

Speed of managed services. Openness of Kubernetes. Sovereignty by design.

Compete head-to-head with **AWS, Azure, GCP** — without sacrificing control or freedom

The Open Source Reality

OpenAI, Netflix, Uber run pure open-source K8s — because they have **1,000+ engineer powerhouses** with unlimited skill and resources.

Everyone else settles for **managed services** — the compromise, not the choice.

Managed Services

AWS / Azure / GCP

Old open source wrapped in proprietary APIs

30-50% markup for a convenience layer

Yesterday's versions, permanently locked in

Zero innovation — you get what the vendor allows

The Real Blocker

Why enterprises can't do open-source at scale

Dependencies & versioning across services and foundations

AI open source is skyrocketing, built for K8s, extremely hard to manage

No one owns the full-stack lifecycle — gaps everywhere

Cross-component complexity grows exponentially with scale

Stacktic makes every company an OpenAI-level operator.

E2E ecosystem automation and versioning of open source — making it **easier than managed** without the engineering army. Not only saving money and sovereignty — providing the **latest innovation** that only open source can deliver.

The Open Source Foundations We Unify

Hundreds of open-source components — Stacktic creates the relationships, versioning, and automation between all of them

Clear Role Separation

No overlap. No duplication. Clean responsibility boundaries.

**0****Day 0: Architecture**

Hours instead of months

1**Day 1: Deployment**

One-click to any Kubernetes

2**Day 2: Operations**

Automated ops, security, rollback

The Joint Platform Stack

Rancher owns the infrastructure. Stacktic owns everything on top.

Potential Integration Ideas

06 / 11

How Stacktic and Rancher create unique value together

Visual Infra Management

Stacktic drag & drop UI designs cluster infra. Output pushes directly into Rancher for provisioning.

Visual design → Rancher provisioning

App Catalog + Relationships

Rancher deploys catalog apps. Stacktic generates routing, data flows, security, and monitoring between them.

Catalog deploys → Stacktic connects

Automated K8s Migration

Stacktic converts Docker, VMs (VMDK/OVA), managed services into K8s manifests. Rancher provides target clusters (RKE2/K3s).

Any legacy → Rancher K8s

Private SaaS Inside Rancher

Stacktic deploys inside Rancher as on-prem platform. Full automation, versioning, security. Zero external dependencies.

On-prem → nothing leaves the network

UNIQUE PROPOSITIONS — DOESN'T EXIST ON AWS, OPENSIFT, OR ANY PLATFORM

Auto SecOps

From metadata

Stack Versioning

Rollback everything

Auto Docs

BOMs, audits, reports

Deploy Anywhere

Cloud agnostic

Multi-Stack Logic

Edge + Enterprise

One Platform

APIs, data, infra, docs

Who This Is For

07 / 11

Any organization running stacks on Kubernetes

Regulated & Sovereign

Finance, Government, Healthcare,
Defense

Air-gapped environments

Compliance-ready stacks

Complete data sovereignty

Enterprises & Platform Teams

Scale-ups, Innovation Labs, App
Factories

Standardized app factories

Multi-tenant environments

Ship production in hours

Any Stack Ops Team

DevOps, SRE, DataOps, MLOps,
SecOps

Automated Day-2 operations

Reduced headcount dependency

One platform for all stack types

Cloud Exit

Migrate from managed

Private AI

Sovereign LLM infra

Modernization

Legacy → K8s

Compliance

Regulated industries

The Platform Landscape

Three approaches — only one delivers speed, control, and sovereignty together

AWS / Azure / GCP

Managed Services

30-50% lock-in premium

Red Hat OpenShift

Enterprise Platform

Proprietary runtime, high cost

BEST FIT

Stacktic + Rancher

Open Platform

Open, sovereign, fully portable

WHAT STACKTIC + RANCHER UNIQUELY DELIVERS

Relationship Automation

Stack logic & data flows

Stack Version Control

Rollbacks & migrations

Security by Design

7-layer auto-generated

Cloud Agnostic

On-prem, air-gap, any cloud

NO OTHER PLATFORM PROVIDES THIS

Enterprise Security & Control

All 7 layers auto-generated from stack metadata — zero manual configuration

0

Manual Security Configs

Everything generated from metadata

100%

Encryption Coverage

mTLS, secrets, transit — all automated

Auto

CISO Compliance Reports

ISO, SOC2, PCI-DSS, HIPAA ready

Real-time CVE & Drift Detection

Vulnerability scanning across all components

Single API — 360° Stack Status

One API call returns full stack metadata, health, security & compliance state

RANCHER TODAY

K8s Management

Clusters, nodes, access control

RANCHER + STACKTIC

Complete Platform

K8s + Stack + Ops + Security + AI

DataOps

Automated data pipelines, ETL orchestration, source-to-storage flows — with versioning, security, and sovereignty built in. Open source data stacks (Kafka, Airflow, Spark) managed as one unit.

SecOps

Auto-generated network policies, RBAC, OPA Gatekeeper, secrets management, CVE scanning — 7-layer security derived from architecture metadata, not manual configuration.

SRE

Stack-level observability across all components — Prometheus, Grafana, alerting, SLA tracking. Full visibility not just per pod, but per stack version with relationship context.

AI Ops & Private AI

Sovereign AI stacks (vLLM, LangFlow, Ollama) automated end-to-end. Metadata-driven intelligence for cost optimization, anomaly detection, and operational insight.

The First Managed Open-Source Platform

Managed Speed

Faster than hyperscaler services

Open Source Power

Latest innovation, no lock-in

Full Sovereignty

Your data, your infra, your rules

STACKTIC + **SUSE Rancher**
